Bullard Head Protection Training

Trust Bullard to provide the best in employee hard hat training. Bullard's head protection history stretches back to 1919 when founder, E.W. Bullard, introduced the hard hat to miners.

About

A trained Bullard expert can conduct an in-person or virtual training session for your employees. We want to ensure that your employees know exactly how to effectively use a hard hat to maximize both protection and comfort—which in turn leads to a more productive work force.

Bullard also has multiple visor and bracket options for our various hard hat lines—of which training is also available. Proper integration of these ancillary items with the hard hat is essential for a proper head protection program.

Key Benefits

Bullard's head protection training program covers:

- Relevant industry standards to ensure compliance and employee safety
- Proper hard hat donning/doffing procedures
- How to make sizing adjustments to ensure proper fit
- How to install or replace suspensions
- How to clean hard hat shell and suspension to extend service life
