Uncorking excellence in wine quality

Laboratory filtration winemaking solutions

Maintain the flavor profile, color, aroma, and quality of your wine

Wine production can be a lengthy and expensive process. An effective quality control program can save winemakers time and money, and enhance the efficiency of production and the quality of the final product.

From vine to wine, we provide a complete portfolio of laboratory filtration products. Use them across winemaking quality control applications to ensure optimized fermentation and the quality of wine.

Applications include general filtration, analytical chemical analysis of additives and final product, and microbiology analysis of spoilage organisms in vinification and final product release steps.

Our flexible microbiology solutions including sterile membrane filters, dispensers, funnels and manifolds

Find it at fishersci.com and fishersci.ca

Microbiological spoilage tests

- Membrane filtration products designed and quality control tested for concentration and recovery of microorganisms by membrane filtration (MF) technique
- Flexible microbiology solutions to suit your lab's workflow and handling needs

Clarification and degassing

- Filter papers with excellent particle retention and high rate of particulate removal
- Glass fiber filter papers with fine particle retention and fast flow rates

Analytical chemistry

- Syringe filters with premium quality and efficiency, used to filter samples prior to HPLC analysis
- Syringe filters with multiple prefilter layers for fast filtration of high particulate samples, combining clarification and analytical filtration

Choose from our range of syringe filters with various diameters, pore sizes, and membrane options to suit your specific needs
